A Bit of History

- **Network Simulator (ns)** – a fork of the **REAL** simulator
- **ns-1** – network simulator v1
 - Project started: ~ 1989
 - Languages: C++ and Tcl (Tool command language)
 - Project status: closed
- **ns-2/NS2** – network simulator v2
 - Project started: ~ 1996
 - Languages: C++ and OTcl (Object Tcl)
 - Project status: **closed**
- **ns-3** – network simulator v3
 - Project started : ~ 2006
 - Languages: C++ and Python
 - Project status: active

A Bit of History (cont'd)

- ns-2 was developed in the frame of the **Virtual InterNetwork Testbed (VINT)** project supported by:
 - Defense Advanced Research Projects Agency (DARPA)
 - National Science Foundation (NSF)
 - University of Southern California / Information Sciences Institute (USC/ISI)
 - Xerox Palo Alto Research Center (Xerox PARC)
 - etc.
- Application fields:
 - Research and development (R&D)
 - Education
- Software:
 - Open source
 - Freeware

Outline

1 A bit of history

2 ns-2

3 Installation of Cygwin

4 Installation of ns-2

5 ns-2 and Ubuntu

6 Simulation workflow

7 Example

8 Bibliography

- Official site:
 - <http://www.isi.edu/nsnam/ns/>
 - http://nsnam.isi.edu/nsnam/index.php/Main_Page
- Last version:
 - **ns-allinone-2.35.tar.gz**, 2011, ~ 60 MB
 - <http://sourceforge.net/projects/nsnam/files/allinone/ns-allinone-2.35/>
- System requirements:
 - C++ compiler
 - UNIX (FreeBSD, Linux, SunOS, Solaris)
 - Windows with Cygwin

Outline

- 1 A bit of history
- 2 ns-2
- 3 Installation of Cygwin
- 4 Installation of ns-2
- 5 ns-2 and Ubuntu
- 6 Simulation workflow

- 8 Bibliography

Installation of Cygwin

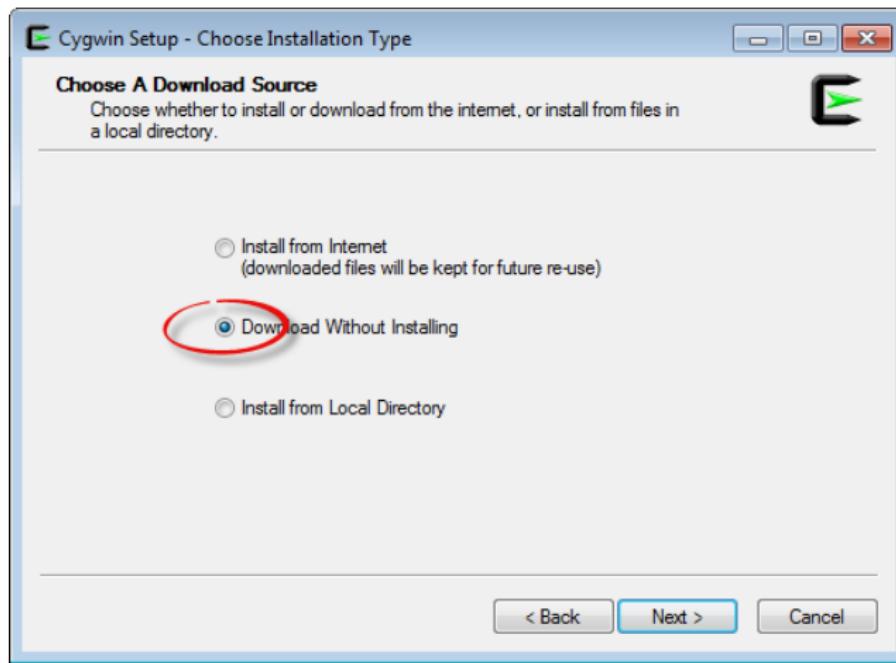

- **Cygwin** – a large collection of GNU and open source tools which provide functionality similar to a Linux distribution on Windows
 - <http://www.cygwin.com>
- Recent release:
 - **2.10.0**
 - `setup-x86.exe` (for 32-bit Windows) or
`setup-x86_64.exe` (for 64-bit Windows)
 - <http://www.cygwin.com/install.html>

Installation of Cygwin (cont'd)

- 2 ways to install Cygwin:
 - Clean install from scratch
 - Update a previously installed version
- Recommended installation order:
 - Download **setup.exe** (~ 1 MB)
 - Run **setup.exe** and download all packages (~ 6 GB)
 - Re-run **setup.exe** and install Cygwin

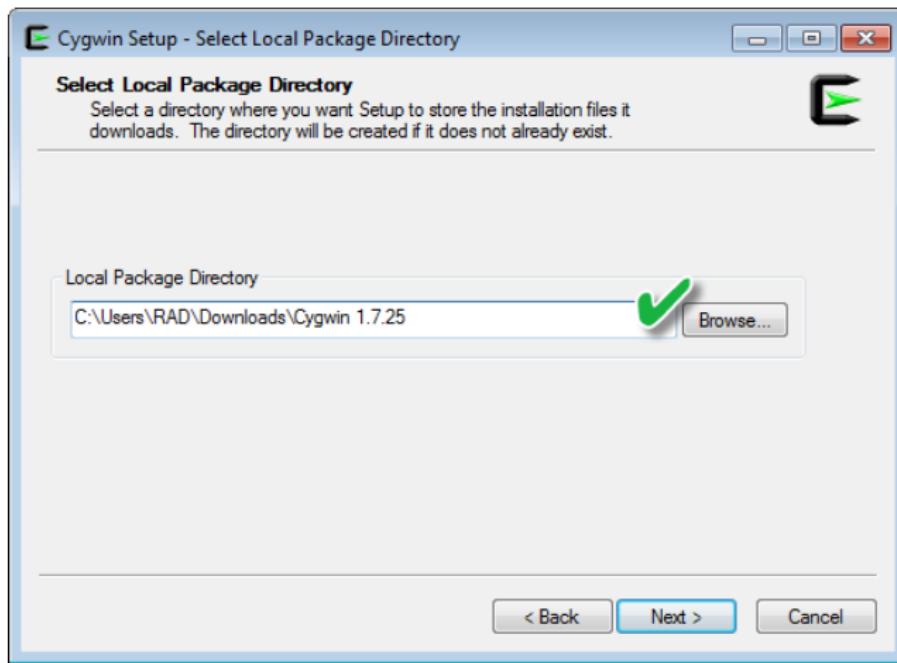

Installation of Cygwin (cont'd)

- Download without installing

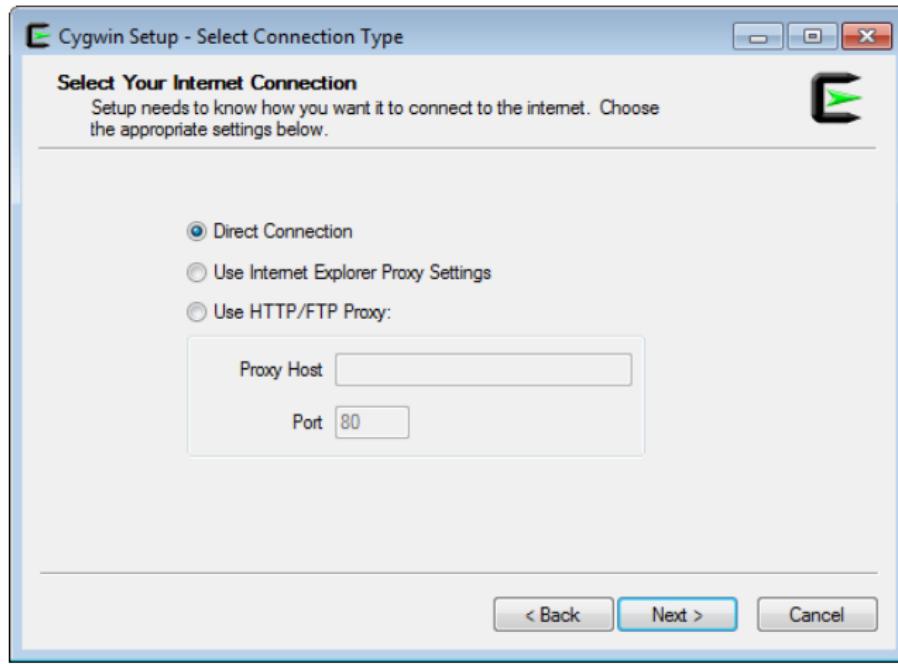

Installation of Cygwin (cont'd)

- Select a local directory to store installation files

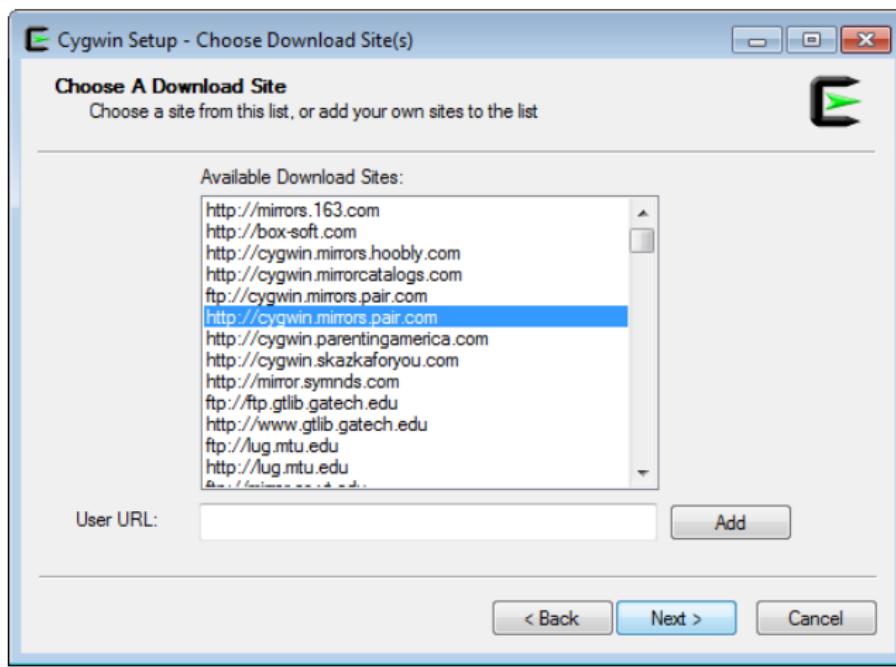

Installation of Cygwin (cont'd)

- Select your Internet connection

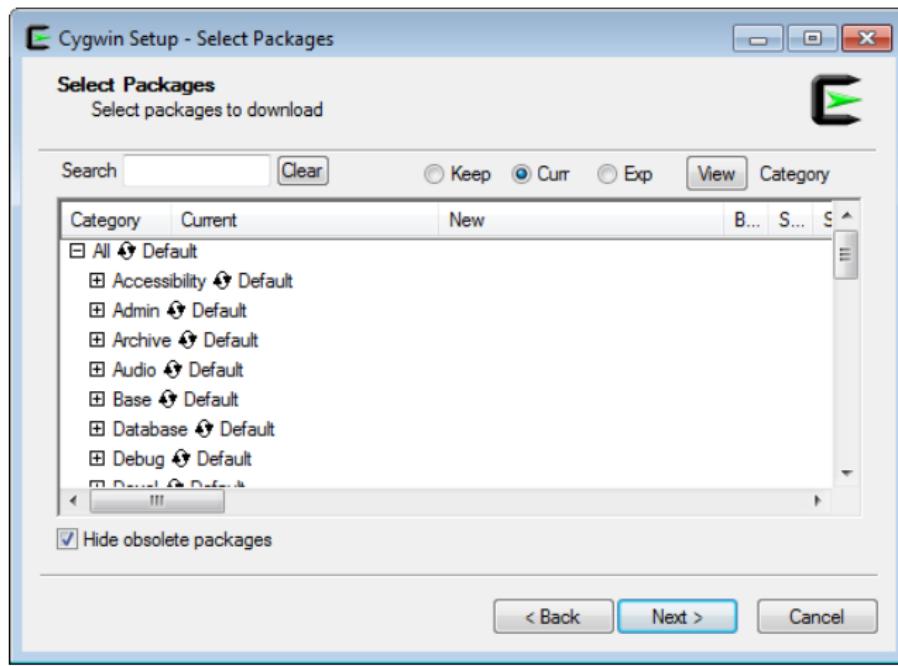

Installation of Cygwin (cont'd)

- Select a server

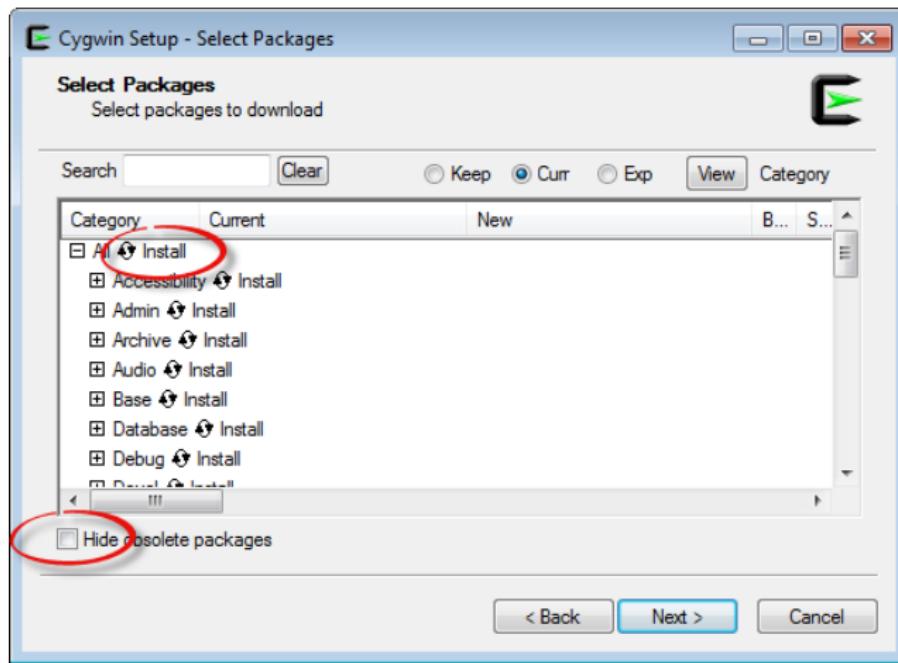

Installation of Cygwin (cont'd)

- Select packages

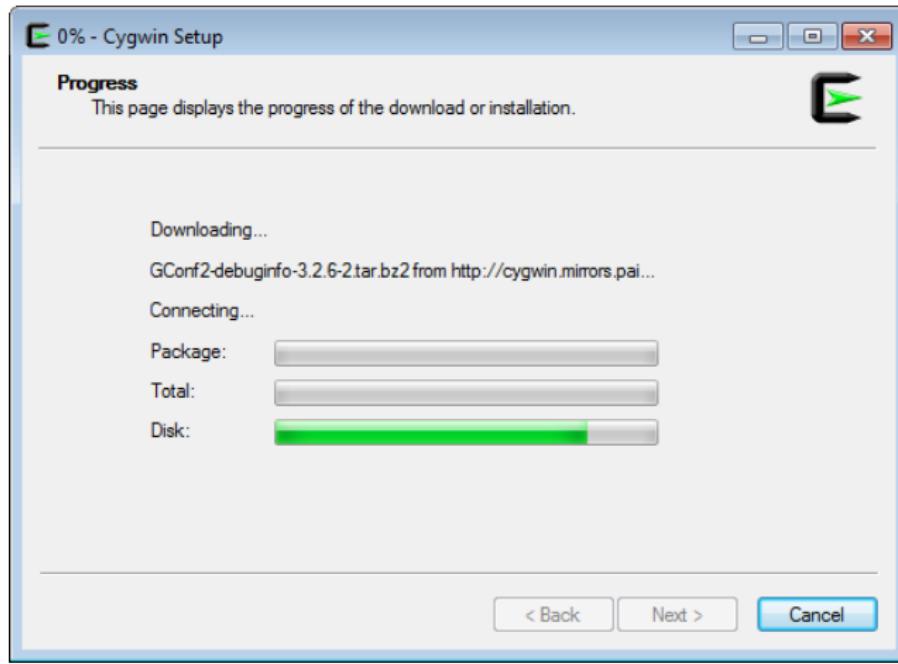

Installation of Cygwin (cont'd)

- Select all packages

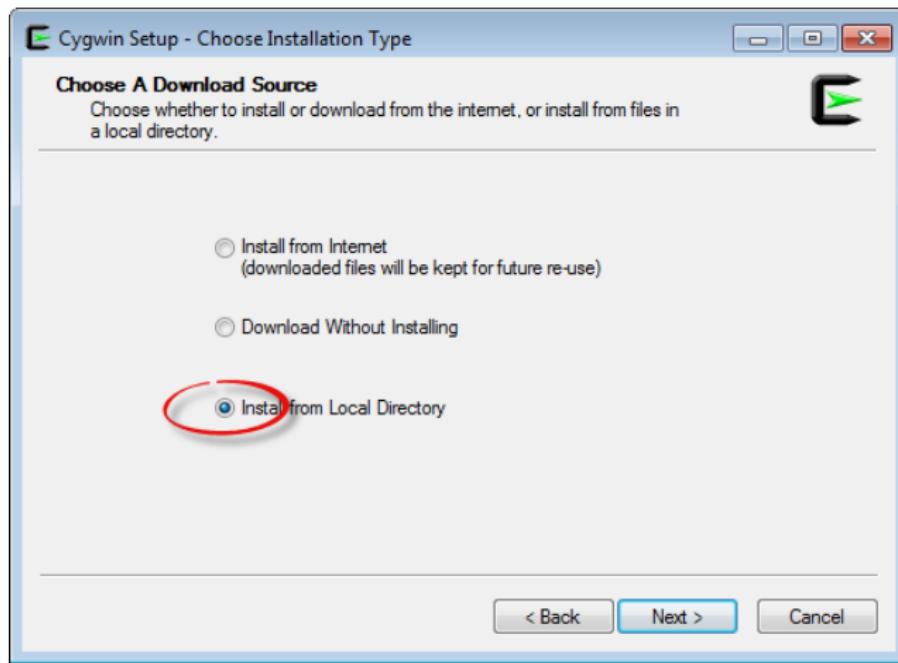

Installation of Cygwin (cont'd)

- Downloading

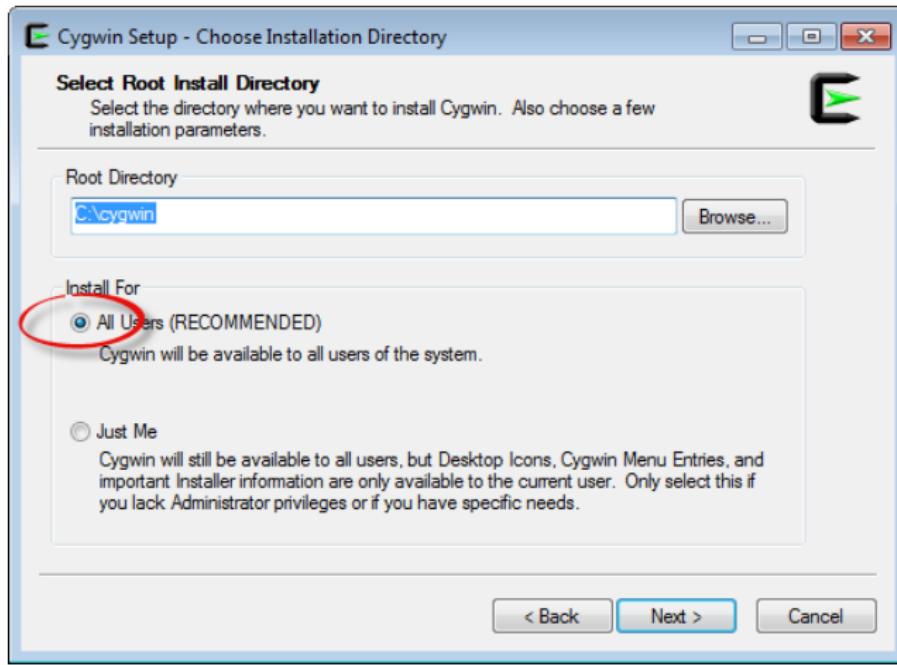

Installation of Cygwin (cont'd)

- Install from the local directory

Installation of Cygwin (cont'd)

- Select the installation directory
 - Size of **c:/cygwin** ~ 14 GB

Outline

- 1 A bit of history
- 2 ns-2
- 3 Installation of Cygwin
- 4 Installation of ns-2
- 5 ns-2 and Ubuntu
- 6 Simulation workflow
- 7 Example
- 8 Bibliography

Installation of ns-2

- Ns make failed...

```

RAD@X201 /ns-allinone-2.35
$
```

Installation of ns-2 (cont'd)

- **Win7 Enterprise SP1 x64 + Cygwin 1.7.25 + ns-2.35 = fail ☹**
 - Cygwin mirrors usually include one version previous to the current one
 - Unfortunately, there is no complete archive of older packages
- **Win7 Enterprise SP1 x64 + Cygwin 1.7.16-1 + ns-2.31 = win ☺**
- **Win7 Enterprise SP1 x64 + Cygwin 2.10.0 + ns-2.35 = ???**

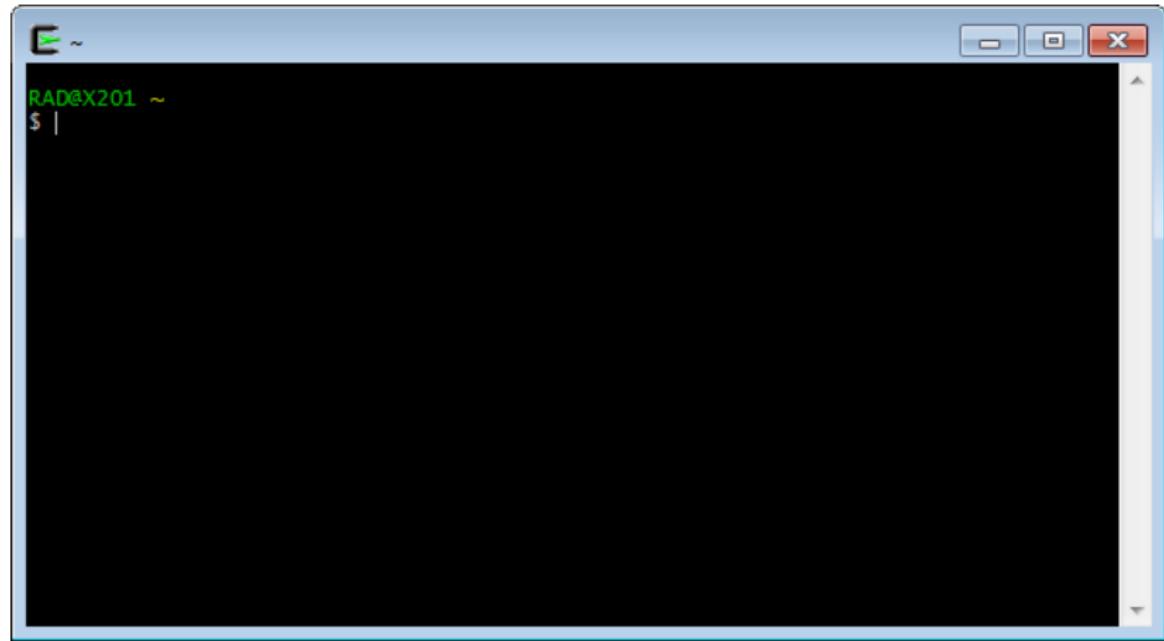

Installation of ns-2 (cont'd)

- Unpack **ns-allinone-2.31.tar.gz** to **c:/cygwin**
 - <http://sourceforge.net/projects/nsnam/files/allinone/ns-allinone-2.31/>

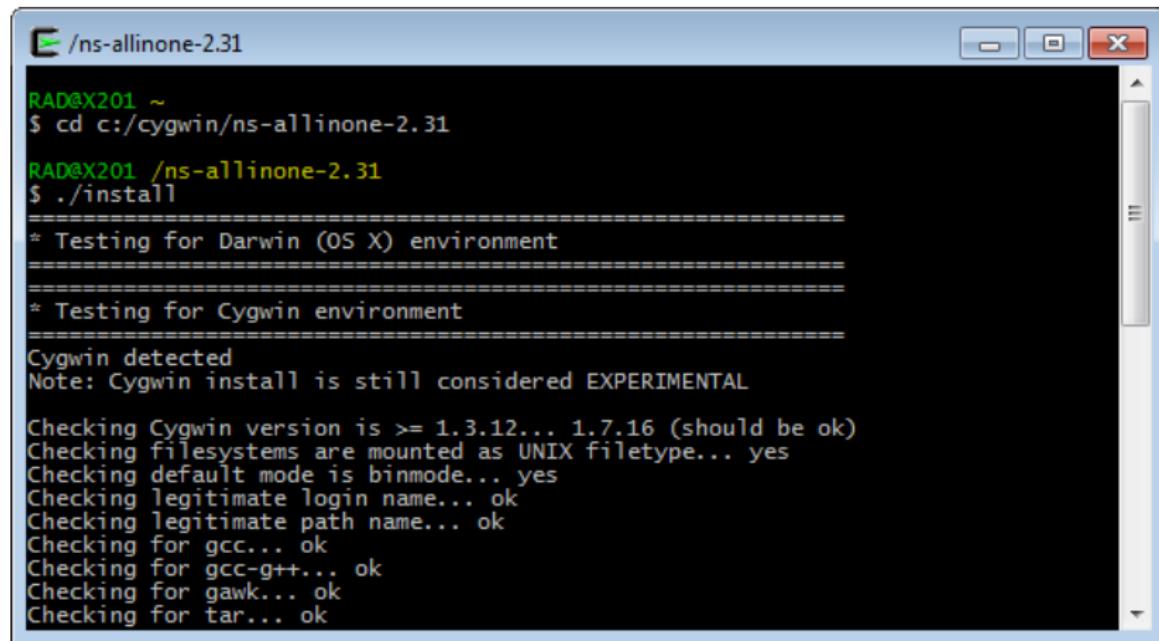

Installation of ns-2 (cont'd)

- Run **Cygwin Terminal**

Installation of ns-2 (cont'd)

- Go to c:/cygwin/ns-allinone-2.31 and type ./install

The screenshot shows a terminal window titled '/ns-allinone-2.31'. The terminal output is as follows:

```
RAD@X201 ~
$ cd c:/cygwin/ns-allinone-2.31

RAD@X201 /ns-allinone-2.31
$ ./install
=====
* Testing for Darwin (OS X) environment
=====
* Testing for Cygwin environment
=====
Cygwin detected
Note: Cygwin install is still considered EXPERIMENTAL

Checking Cygwin version is >= 1.3.12... 1.7.16 (should be ok)
Checking filesystems are mounted as UNIX filetype... yes
Checking default mode is binmode... yes
Checking legitimate login name... ok
Checking legitimate path name... ok
Checking for gcc... ok
Checking for gcc-g++... ok
Checking for gawk... ok
Checking for tar... ok
```

Installation of ns-2 (cont'd)

- Done!

```
C:/ns-allinone-2.31

Nam has been installed successfully.
Please compile your xgraph separately.

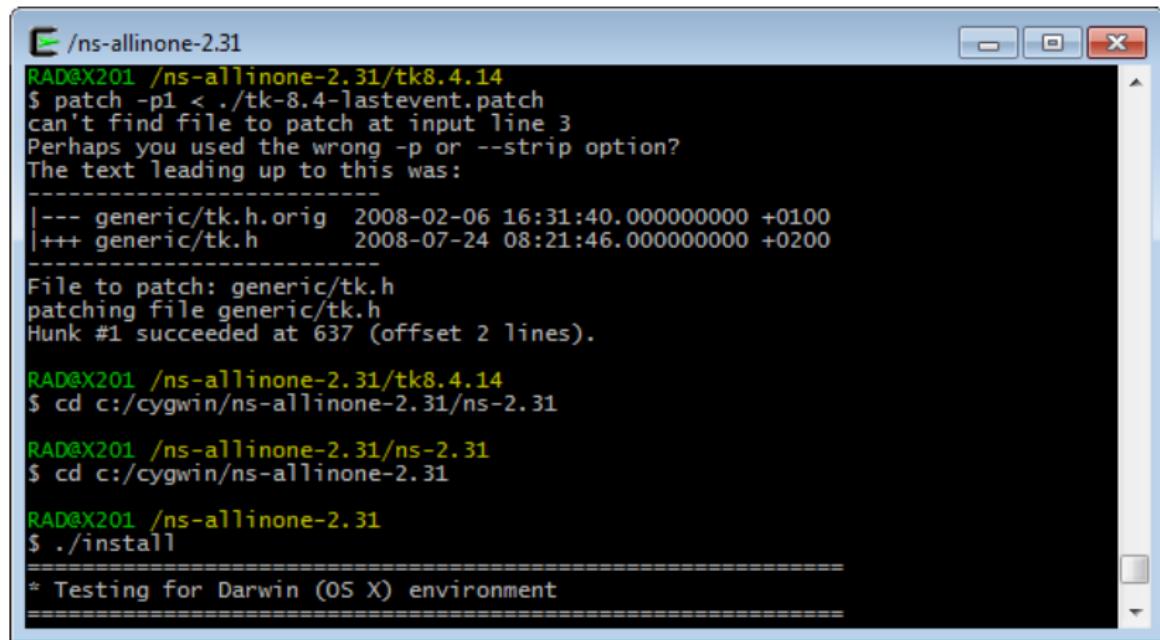

Ns-allinone package has been installed successfully.
Here are the installation places:
tcl8.4.14:      /ns-allinone-2.31/{bin,include,lib}
tk8.4.14:      /ns-allinone-2.31/{bin,include,lib}
otcl:          /ns-allinone-2.31/otcl-1.13
tclcl:         /ns-allinone-2.31/tclcl-1.19
ns:            /ns-allinone-2.31/ns-2.31/ns
nam:           /ns-allinone-2.31/nam-1.13/nam
gt-item:        /ns-allinone-2.31/item, edriver, sgb2alt, sgb2ns, sgb2comns, sgb2hierns
--
```

Installation of ns-2 (cont'd)

- Patch **tk.h** to make **nam** work correctly:
 - Download **tk-8.4-lastevent.patch** from
http://bugs.gentoo.org/show_bug.cgi?id=225999
 - Save it to **c:/cygwin/ns-allinone-2.31/tk8.4.14**
 - Go to **c:/cygwin/ns-allinone-2.31/tk8.4.14** and type
patch -p1 < ./tk-8.4-lastevent.patch
 - In case of problems, replace **-p1** by **-p0**
 - Specify which files to patch, i.e. **generic/tk.h**
 - Go to **c:/cygwin/ns-allinone-2.31** and re-run **./install**

Installation of ns-2 (cont'd)

- Apply the patch and re-run installation of ns-2

The screenshot shows a terminal window titled '/ns-allinone-2.31' running on a Windows system (RAD@X201). The user is applying a patch to the tk8.4.14 directory. The terminal output is as follows:

```
RAD@X201 /ns-allinone-2.31/tk8.4.14
$ patch -p1 < ./tk-8.4-lastevent.patch
can't find file to patch at input line 3
Perhaps you used the wrong -p or --strip option?
The text leading up to this was:
-----
|--- generic/tk.h.orig 2008-02-06 16:31:40.000000000 +0100
|+++ generic/tk.h      2008-07-24 08:21:46.000000000 +0200
-----
File to patch: generic/tk.h
patching file generic/tk.h
Hunk #1 succeeded at 637 (offset 2 lines).

RAD@X201 /ns-allinone-2.31/tk8.4.14
$ cd c:/cygwin/ns-allinone-2.31/ns-2.31

RAD@X201 /ns-allinone-2.31/ns-2.31
$ cd c:/cygwin/ns-allinone-2.31

RAD@X201 /ns-allinone-2.31
$ ./install
=====
* Testing for Darwin (OS X) environment
=====
```

Installation of ns-2 (cont'd)

- Once the process is finished, add the environment variables

```
E /ns-allinone-2.31
--
Please put /ns-allinone-2.31/bin:/ns-allinone-2.31/tcl8.4.14/unix:/ns-allinone-2
.31/tk8.4.14/unix
into your PATH environment; so that you'll be able to run itm/tclsh/wish/xgraph.

IMPORTANT NOTICES:

(1) You MUST put /ns-allinone-2.31/otcl-1.13, /ns-allinone-2.31/lib,
    into your LD_LIBRARY_PATH environment variable.
    If it complains about X libraries, add path to your X libraries
    into LD_LIBRARY_PATH.
    If you are using csh, you can set it like:
        setenv LD_LIBRARY_PATH <paths>
    If you are using sh, you can set it like:
        export LD_LIBRARY_PATH=<paths>

(2) You MUST put /ns-allinone-2.31/tcl8.4.14/library into your TCL_LIBRARY environmental
    variable. Otherwise ns/nam will complain during startup.

After these steps, you can now run the ns validation suite with
cd ns-2.31; ./validate
```

Installation of ns-2 (cont'd)

- Environment variables:

① Path

- /ns-allinone-2.31/bin;/ns-allinone-2.31/tcl8.4.14/unix;
/ns-allinone-2.31/tk8.4.14/unix

② LD_LIBRARY_PATH

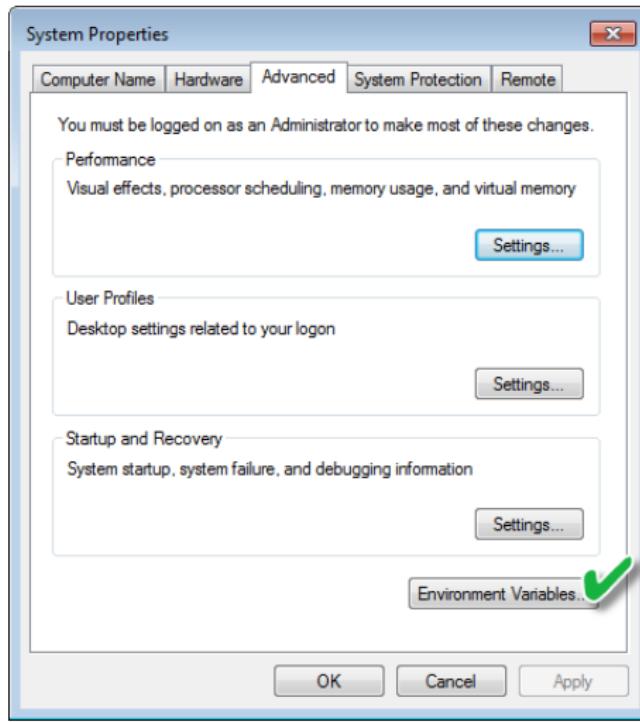

- /ns-allinone-2.31/otcl-1.13;/ns-allinone-2.31/lib

③ TCL_LIBRARY

- /ns-allinone-2.31/tcl8.4.14/library

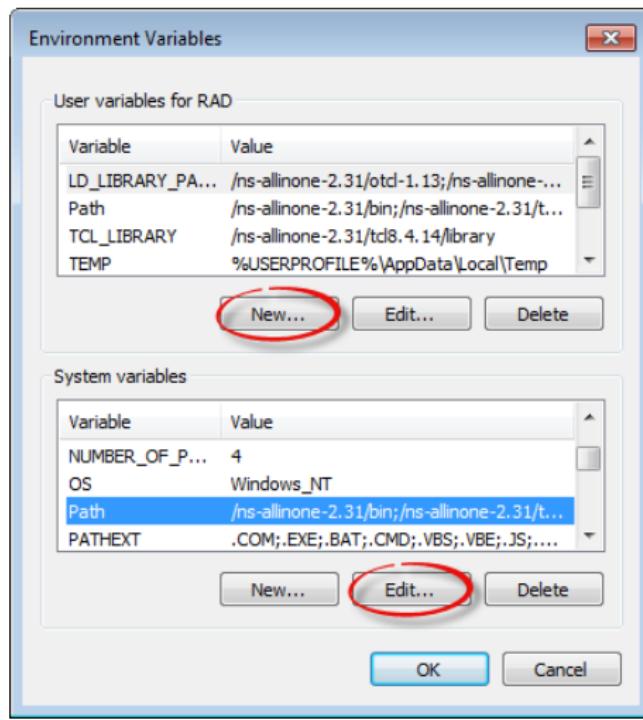

Installation of ns-2 (cont'd)

- Environment variables in Windows 7

Installation of ns-2 (cont'd)

- Add/edit environment variables

Installation of ns-2 (cont'd)

- Go to c:/cygwin/ns-allinone-2.31/ns-2.31 and type ./validate

The screenshot shows a terminal window titled '/ns-allinone-2.31/ns-2.31'. The window contains the following text:

```
After these steps, you can now run the ns validation suite with
cd ns-2.31; ./validate

For trouble shooting, please first read ns problems page
http://www.isi.edu/nsnam/ns/ns-problems.html. Also search the ns mailing list archive
for related posts.

RAD@X201 /ns-allinone-2.31
$ cd c:/cygwin/ns-allinone-2.31/ns-2.31

RAD@X201 /ns-allinone-2.31/ns-2.31
$ ./validate
Cygwin detected
Note: Cygwin validation is still considered EXPERIMENTAL

(Validation can take 1-30 hours to run.)

ns-2 and Ubuntu

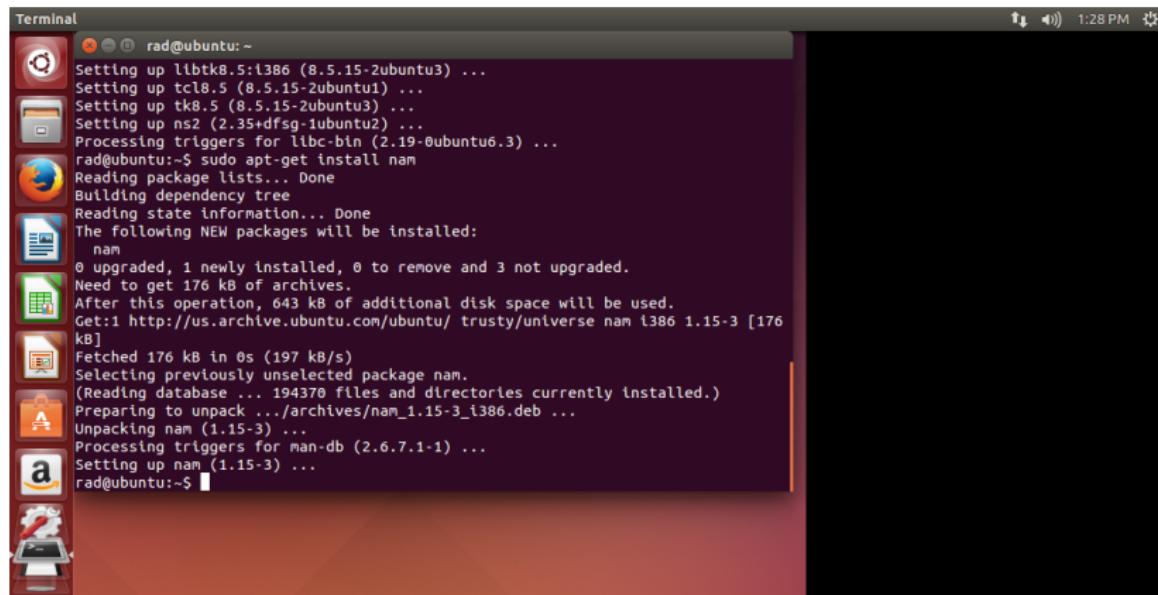

- Install ns-2: `sudo apt-get install ns2`
 - Run Terminal: <Ctrl>+<Alt>+<T>

A screenshot of an Ubuntu desktop environment. In the center is a terminal window titled "Terminal" with the command "rad@ubuntu:~". The terminal displays the output of the "sudo apt-get install ns2" command, showing package lists, dependency trees, and upgrade information. The background shows the Unity interface with various application icons in the dock and a clock in the top right corner.

```
rad@ubuntu:~$ sudo apt-get install ns2
[sudo] password for rad:
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
 libtcl1 libtcl8.5 libtclcl1 libtk8.5 tcl8.5 tk8.5
Suggested packages:
 gnuplot tcl-tclreadline
The following NEW packages will be installed:
 libtcl1 libtcl8.5 libtclcl1 libtk8.5 ns2 tcl8.5 tk8.5
0 upgraded, 7 newly installed, 0 to remove and 3 not upgraded.
Need to get 3,302 kB of archives.
After this operation, 18.6 MB of additional disk space will be used.

```

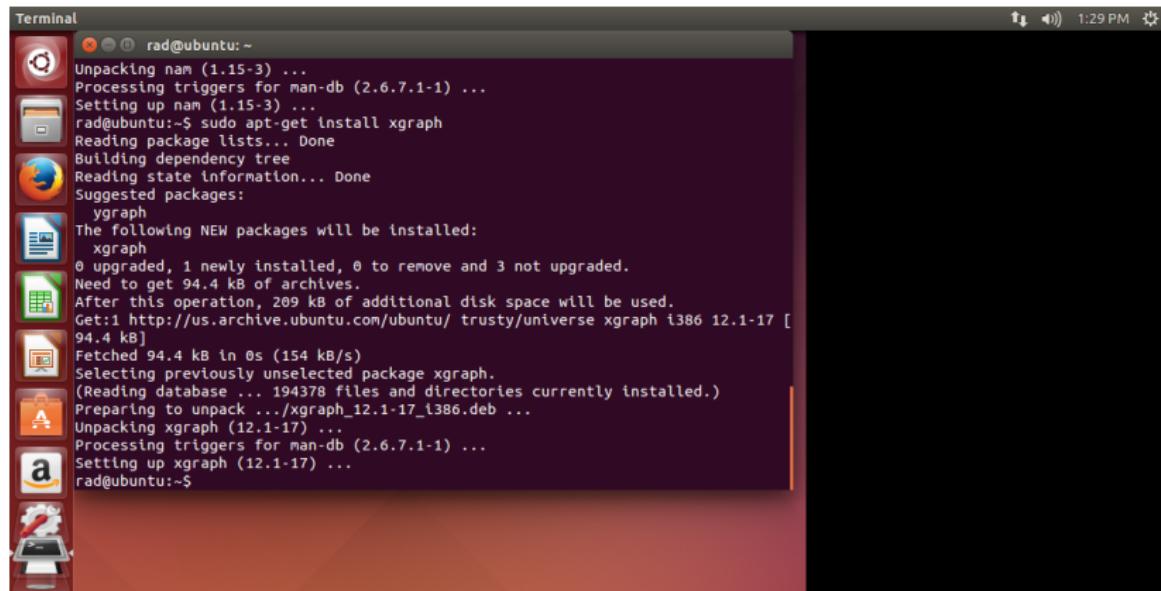

ns-2 and Ubuntu (cont'd)

- Install nam: **sudo apt-get install nam**
 - See <http://askubuntu.com/questions/467901/segmentation-fault-core-dumped-in-ns2-ubuntu-14-04> ☺
 - Or use **ubuntu-12.04.5** instead of ubuntu-14.04.1

A screenshot of an Ubuntu desktop environment. A terminal window is open in the foreground, showing the command line interface for installing the nam package. The terminal output includes package dependencies, file transfers, and processing steps. The desktop background is visible behind the terminal window, showing icons for various applications like the Dash, Home, and Dash to Dock.

ns-2 and Ubuntu (cont'd)

- Install xgraph: **sudo apt-get install xgraph**

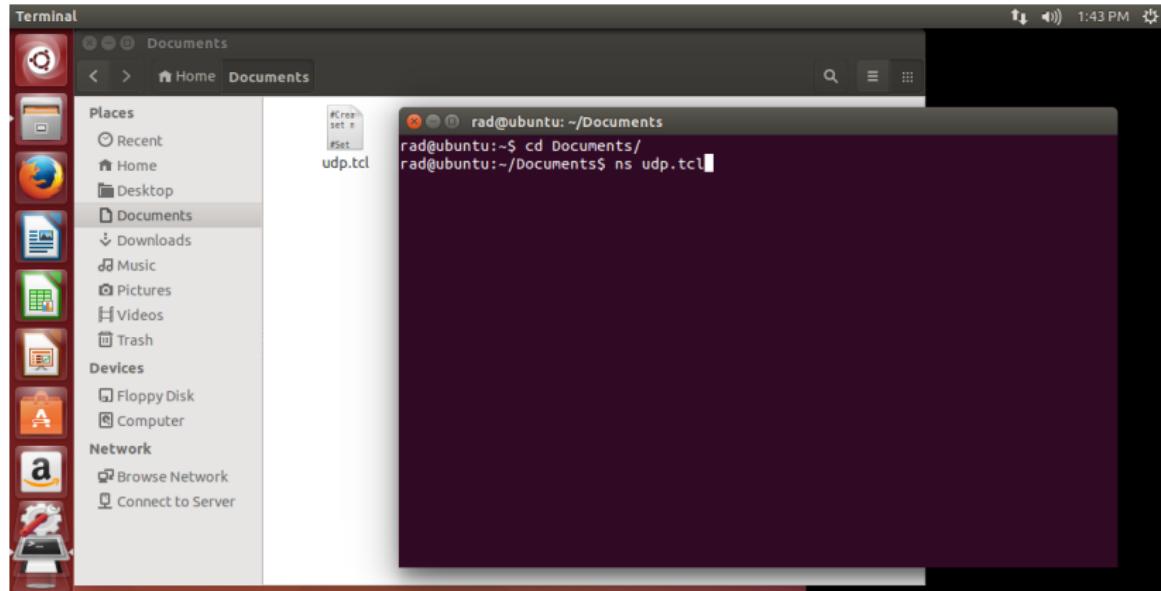

A screenshot of an Ubuntu desktop environment. A terminal window is open in the top-left corner, showing the command `sudo apt-get install xgraph` being run and its output. The output includes package unpacking, dependency checking, and a successful installation of xgraph. The desktop background is orange, and various icons are visible in the dock at the bottom.

```
Terminal
rad@ubuntu:~$ sudo apt-get install xgraph
Unpacking nam (1.15-3) ...
Processing triggers for man-db (2.6.7.1-1) ...
Setting up nam (1.15-3) ...

ns-2 and Ubuntu (cont'd)

- Run simulation: **ns <file name>.tcl**

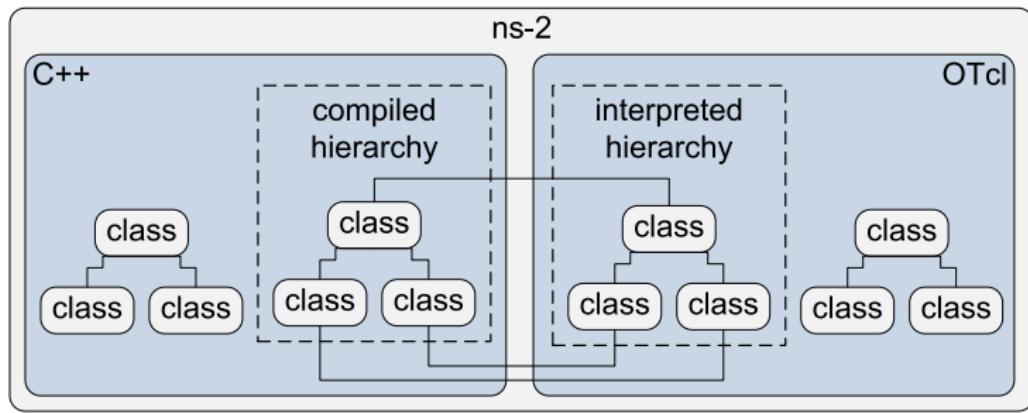

Outline

- 1 A bit of history
- 2 ns-2
- 3 Installation of Cygwin
- 4 Installation of ns-2
- 5 ns-2 and Ubuntu
- 6 Simulation workflow
- 7 Example
- 8 Bibliography

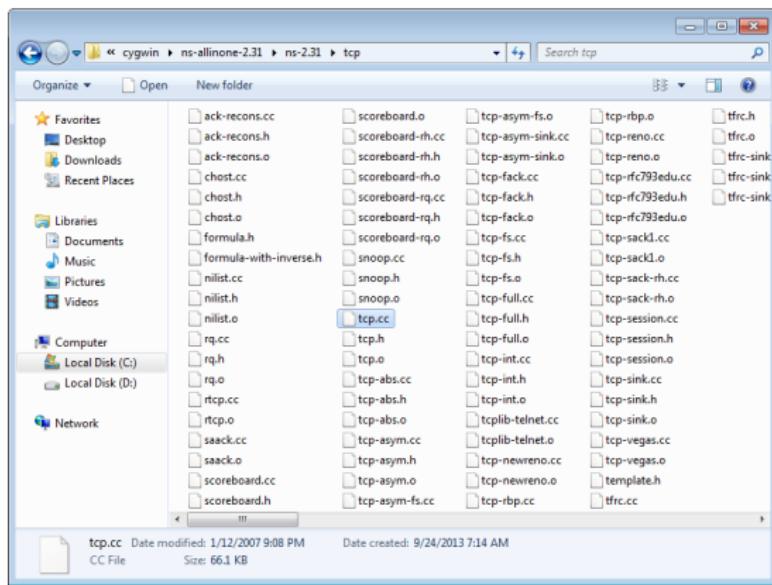

Simulation Workflow

- ns-2 architecture:
 - C++ defines the internal mechanism of the simulation objects
 - OTcl sets up simulation by assembling and configuring the objects as well as scheduling discrete events
- ns-2 in Cygwin:
 - Run **XWin Server**
 - Go to the directory with your script **<file name>.tcl**
 - In **XWin Server** window type **ns <file name>.tcl**

Simulation Workflow (cont'd)

- ns-2 features:
 - A wide range of communications protocols and algorithms
 - **xgraph** – statistical graphing tool
 - **nam** – visualization tool

Simulation Workflow (cont'd)

- **ns-2 simulation workflow**

- ① Using a text editor, create a baseline script

- Define the network topology (nodes, links, queues, etc.)
- Attach transport layer protocols ('Agents') and applications ('Applications') to the end nodes
- Create traffic
- Choose statistics to be collected
- Run the simulation
- View the results

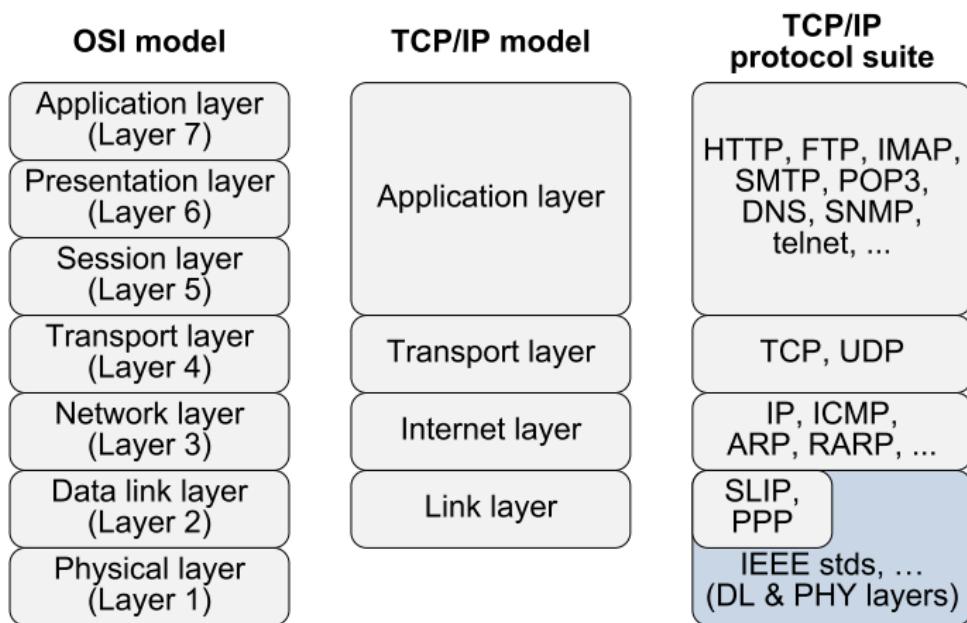

- ② Duplicate the script

- Make changes
- Re-run the simulation
- Compare the obtained results

- ③ Repeat №2 if needed

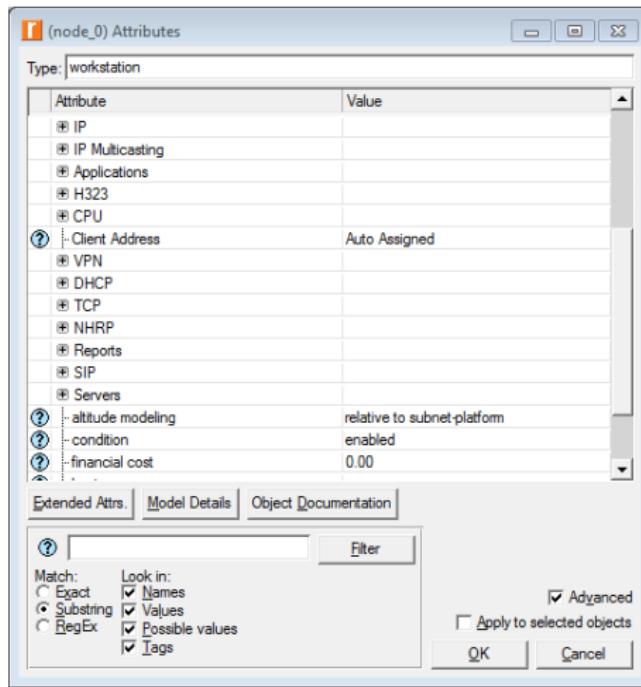

Simulation Workflow (cont'd)

- TCP/IP protocol suite

Simulation Workflow (cont'd)

- Compare with nodes in OPNET/Riverbed Modeler
 - **set node_0 [\$ns node]**

Outline

1 A bit of history

2 ns-2

3 Installation of Cygwin

4 Installation of ns-2

5 ns-2 and Ubuntu

6 Simulation workflow

7 Example

8 Bibliography

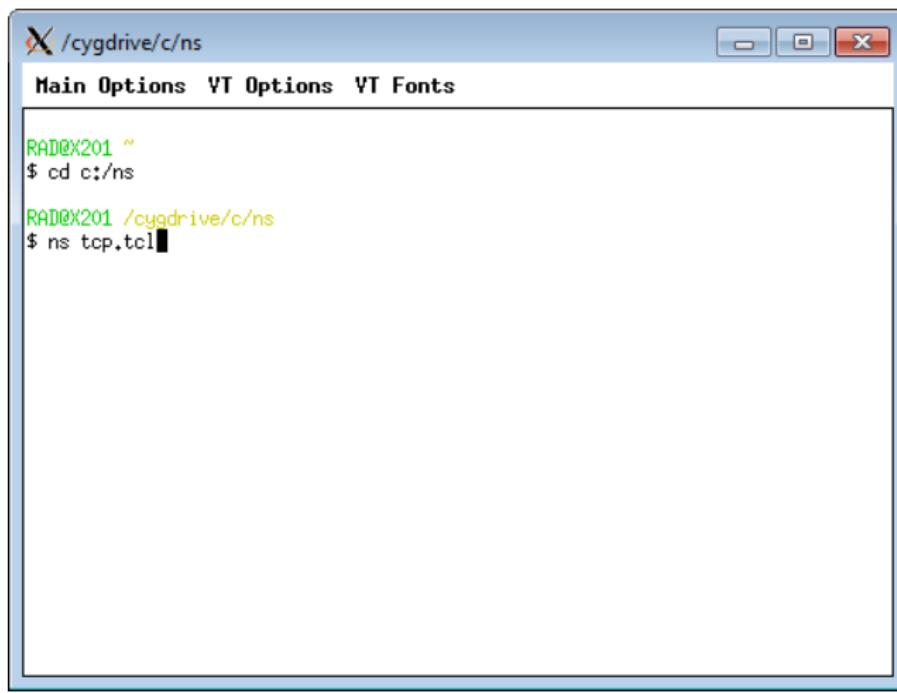

Example

- UDP vs. TCP

UDP	TCP
Message-oriented	Byte-stream-oriented
Connectionless	Connection-oriented
Stateless	Stateful
Unreliable	Reliable
Unicast and multicast	Unicast only
Used by a few user applications (VoIP, multimedia streaming, etc.)	Used by many user applications (WWW, email, FTP, Telnet, etc.)
Used by many network services (RIP, SNMP, DNS, etc.)	Used by a few network services (e.g., DNS zone transfers)

Example (cont'd)

- Run c:/ns/tcp.tcl in XWin Server

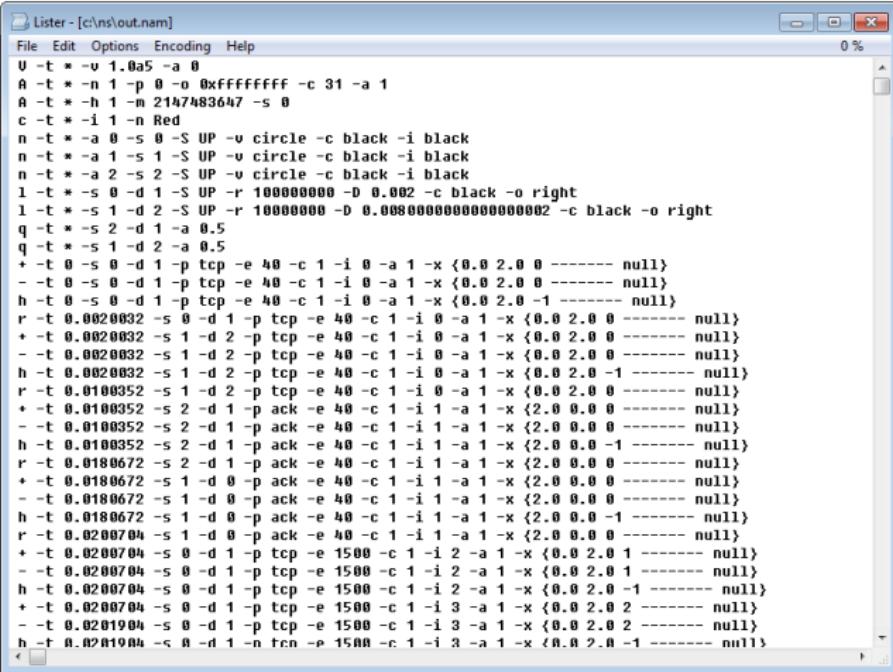

The screenshot shows a terminal window titled '/cygdrive/c/ns' running on an XWin Server. The window has a menu bar with 'Main', 'Options', 'VT Options', and 'VT Fonts'. The terminal prompt is 'RAD@X201 ~' followed by '\$ cd c:/ns'. Below that, the command '\$ ns tcp.tcl' is being typed, with the cursor at the end of 'tcl'.

```
RAD@X201 ~
$ cd c:/ns
RAD@X201 /cygdrive/c/ns
$ ns tcp.tcl
```

Example (cont'd)

- View out.nam

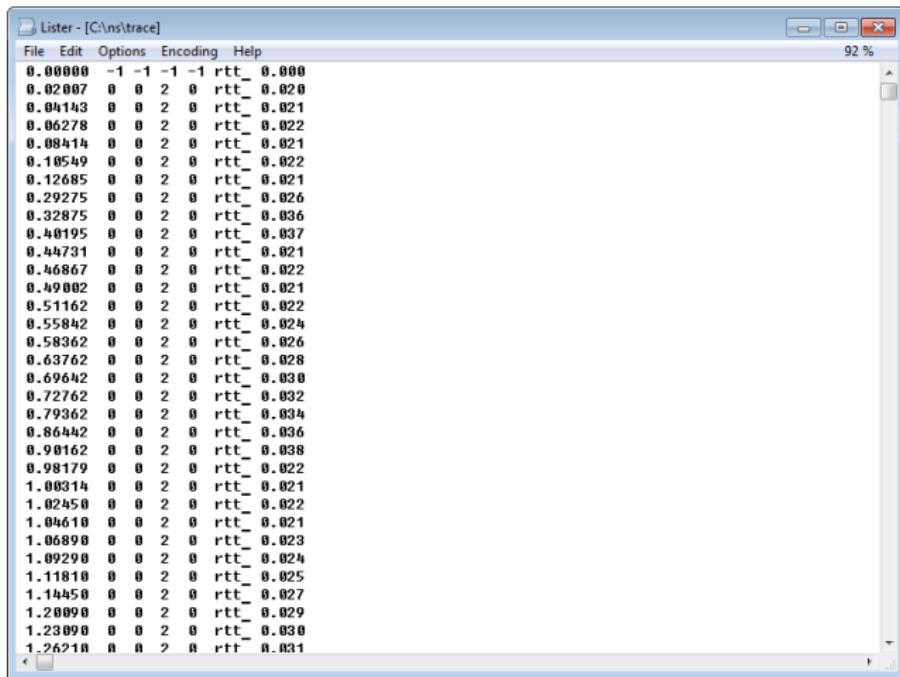

The screenshot shows a Windows application window titled "Lister - [c:\ns\out.nam]". The window has a menu bar with File, Edit, Options, Encoding, Help, and a status bar showing "0 %". The main area contains the following text:

```
U -t * -v 1.0a5 -a 0

Example (cont'd)

- View the results (RTT = Round-Trip Time)

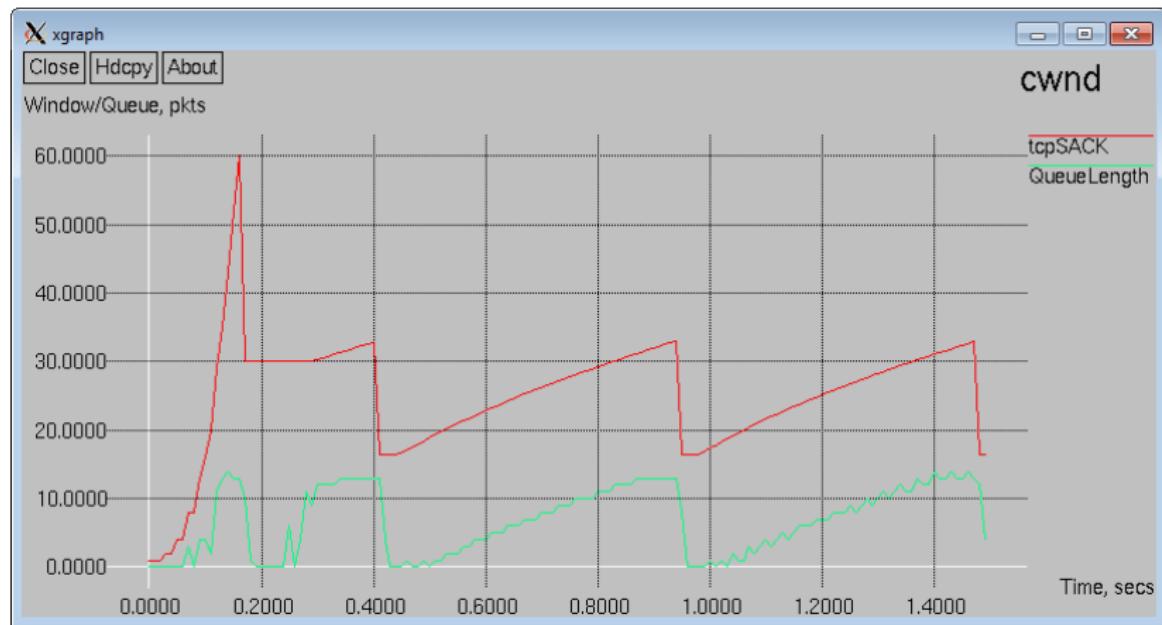

The screenshot shows a Windows application window titled "Lister - [C:\ns\trace]". The window has a standard title bar with icons for minimize, maximize, and close. Below the title bar is a menu bar with "File", "Edit", "Options", "Encoding", and "Help". The main area of the window contains a list of numerical entries, each consisting of a timestamp followed by a sequence of zeros and the string "rtt_". The list starts at 0.00000 and ends at 1.26218, with a total of 31 entries. The text is in a monospaced font.

Timestamp	RTT Value
